COMPLETE RUBBERIZED TRACK SYSTEM

AcryTrack™

Our multi-layer, rubberized running track system utilizes the proven technology of GenFlo® latex products. The system consists of tack coat latex, binder coat and top coat (100% acrylic) for a long lasting track surface.

Designed for durability and performance, AcryTrack is a good balance of strength and resilience to UV light, weather and aging.

The AcryTrack system is usually installed to a depth of 3/8" to 1/2". Typical usage is five layers of granule rubber particles, including recycled EPDM. The acrylic latex emulsion top coat is applied to provide excellent UV resistance and sheen. The system can be black or colored.
